

ONS.APPLICATIONS.APPLICATIONS.APPLICATIONS.APPLICATIONS

Flanged motovibrators have the goal of transmitting the vibration to remove liquids from solids, separating finer from coarser particles, or reducing pulp to a soft solid.

CIRCULAR SIEVES

Particle separation and screening. For liquids, powders, enamels, slip, agglomerates.

CIRCULAR VIBRATING MACHINES

Surface Finishing, Deburring, Polishing, Brightening and Drying.

Performance & Technical Features:

- Centrifugal force: 200 ~ 4,500 kg;
- 2, 4 and 6 poles three-phase;
- Vacuum-impregnated windings using Class F insulating materials;
- Premium quality lifetime sealed bearings;
- FEMA-designed frame;
- ATEX ExII3D;
- PTC standard from size 60 (available on request for smaller sizes);
- Multiple voltages matching electric specifications worldwide.
